

Effective Dental Hygiene

Go on a Germ Hunt:

Firstly, The teacher explains that we need a microscope to see germs- as they are microscopic!

- 1** Ask children to look at their hands and tell you if they're clean- most children will say yes!!
- 2** Invite them to touch as many different surfaces as possible.
- 3** Ask the children if they still think their hands are clean? Reinforce that germs are microscopic! Most will still think their hands are clean.
- 4** Take a baby wipe and gently wipe your hands- the wipe will be dirty. Show this and tell the class about germs being microscopic and not being able to see them with the naked eye!
